Case: This is a very unique and unusual case design from the "Atomic Era." . The crystal on this watch is in great condition as well. The unique lugs on this watch that really set it apart. The lugs are on an "X" pattern which flare out from the center of the case. It makes an attractive appearance when worn. The case is gold tone, and hallmarked aluminum on the case back. The case back has no inscriptions or dedications on it, but there is some light wear on the back only.

Dial: The dial of this watch looks cool (with a "Dooms Day" feel) It measures 31 mm across (33 mm with the crown) and 38 mm lug to lug. The silver outer chapter has raised gold numeral hour markers. The black inner dial looks great against the gold hands and the red sweeping second hand

Movement: 1 Jewel Mechanical Wind - Swiss Made Movement.

Strap: Genuine Leather, black 18 mm IW with black stitching and a gold toned buckle.

Comments: An excellent example of a 1950s Sci-Fi craze influenced wristwatch. This one has the look of the Dooms Day count down indicator with a bulls eye in the middle and a bright red seconds hand - in good running order.
